

Malthesh Karnam

Design Engineer

PROFILE SUMMARY

I am a Medical Device professional with 7+ years specializing in EU MDR 2017/745 compliance, ISO 13485, and ISO 14971 risk management. I have extensive experience in DHF remediation, design verification, and managing complex product lifecycles within Agile PLM. Notably, I successfully led the transition of over 700+ drawings and labels for BREXIT compliance, ensuring seamless regulatory alignment and market continuity.

EDUCATION

- 2017

M.Tech
Ballari Institute Of Technology & Management
- 2014

B.Tech / B.E.
Proudadevaraya Institute of Technology, Hosapete

WORK EXPERIENCE

- Jun 2019 - Present

Design Engineer
HCLTech

1. Analyzed various classification of medical devices by comparing with Instructions for Use (IFUs) to understand operational procedures.

2. Demonstrated comprehensive knowledge of ISO 13485:2016, ISO 14971:2012, ISO 10993 series, and EU MDR 2017 regulatory requirements.

3. Conducted gap assessments for medical devices to achieve full compliance with EU MDR Annex I and Annex II, identifying and addressing key regulatory risks.

4. Performed Requirements Traceability Matrix (RTM) gap assessment and remediation, developing design verification plan, functional test, transit, environmental test and dimensional test rationale protocols/reports, observed live testings in video calls, get test datas and uploaded into Agile Product Lifecycle Management (PLM).

5. Worked on GSPR checklist and technical documentation with regulatory affairs for final submission

6. Supported for Risk Management Files for medical devices, Design Failure Mode and Effects Analysis (DFMEA) in alignment with ISO 14971 standards.

7. Successfully reviewed and updated 728 engineering drawings for BREXIT compliance, transitioning CE markings from CE0086 to CE2797.

8. Received formal customer recognition for delivering the BREXIT project ahead of schedule, ensuring regulatory readiness.

9. Supported labeling transition activities for BREXIT, ensuring accuracy and compliance with new standards.

10. Uploaded updated labels and associated ECOs into Agile PLM system.

11. Supported Packaging test protocol drafting as per the ISTA standards.

KEY SKILLS

- Mdr Remediation
- Verification and Validation
- Technical Documentation
- Tolerance Stackup Analysis
- Solid Works
- Medical Devices
- DHF Remediation
- ISO 13485
- ISO 14971
- Agile Methodology
- Label Design
- Adobe Acrobat
- Adobe
- GAP Assessment
- Gd T

HOBBIES

Singing Monoacting Cricket

LANGUAGES

- Kannada
- English
- Hindi
- Telugu

EXTRA CURRICULAR

Paticipating in HCL fests

Singing, Moniacting

12. Performed Design History File (DHF) gap assessments and implemented effective remediation strategies to meet quality standards.
13. Worked on DHF binder creation for remediated project in PLM System.

Projects

549 Days

Endotoxin limit specification

1. Developed an Endotoxin Limit Specification report for Integral Lifesciences to ensure medical devices meet safety standards.
2. Conducted thorough analysis to verify that devices do not induce pyrogenic responses in humans.
3. Authored a comprehensive rationale report supporting the endotoxin specification, demonstrating adherence to regulatory requirements.
4. Collaborated with cross-functional teams to streamline the report preparation process, enhancing project efficiency.

1369 Days

DHF remediation

1. Requirements Traceability Matrix (RTM) gap asesment and remediation, developing design verification plan, functional test, transit, environmental test and dimensional test rationale protocols /reports and uploaded into Agile Product Lifecycle Management (PLM).
2. Worked on GSPR checklist and technical documentation with regulatory affairs for final submission.
3. Supported for Risk Management Files for medical devices, Design Failure Mode and Effects Analysis (DFMEA) in alignment with ISO 14971 standards.

700 Days

BREXIT Labelling Transition

1. Led the BREXIT Labelling Transition project for Integral Lifesciences, ensuring compliance with new regulations.
2. Updated 728 engineering drawings and labels to meet the BREXIT standards, facilitating a seamless transition from CE0086 to CE2797.
3. Collaborated with cross-functional teams to review and implement necessary changes, enhancing quality control measures.
4. Achieved project completion within the designated timeline, significantly reducing potential compliance risks.

335 Days

EUMDR Gap assessment & remediation activity

Gap assessments for medical devices to achieve full compliance with EU MDR Annex I and Annex II, identifying and addressing key regulatory risks.

304 Days

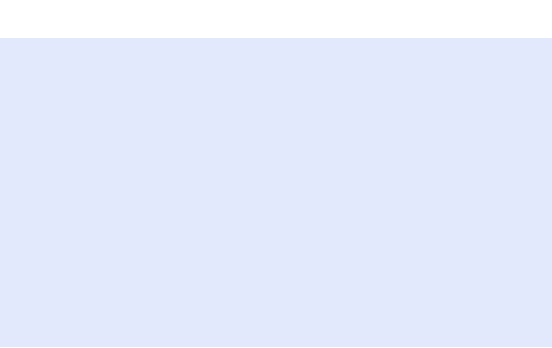

Study Of Mechanical And Drilling Behaviour Of AL7075 Reinforced With Boran Carbide

Metal grid composites (MMCs) have essentially moved forward properties including high specific strength, damping capacity, Specific modulus also great wear safety contrasted with unreinforced alloys, Aluminium 7075 need been chose as grid phase, concerning illustration constantly generally utilized by car and aviation requisition also hosting the most noteworthy quality around know business Al alloys. We study the mechanical properties and drilling behavior of al7075 reinforced with B4C by varying 2% ,4%,6% .

365 Days

Water fuel engine cum LPG

1. Developed and optimized a water fuel engine integrated with

LPG for Engineering Projects.

2. Conducted performance analysis of a 4-stroke petrol engine using a hydrogen and LPG mixture.
3. Enhanced fuel efficiency and reduced emissions through innovative engineering solutions.
4. Collaborated with a multidisciplinary team to test and refine engine performance metrics.
